Decision summary

Partnering and competitive decisions are routinely made off literature counts, which reward large fields rather than locating real activity. NIH RePORTER exposes investigator-level award totals, which show where work is actually funded. That is a different and more useful map.

The opportunity is not to collect more documents. It is to connect funding, technical proof, regulation, competitors and buyers into one account-level decision map.

The practical question

Which targets and investigators carry real funded momentum rather than publication volume?

What Tensorust would monitor

- Resolve investigator funding and trial activity to the specific targets and modalities in a pipeline.
- Separate genuine research leaders from administrative recipients before any partnering list is built.
- Join registered trials and regulatory action to competing assets, sponsor and stage.
- Monitor award renewals, registrations and regulatory events as dated signals that a position has moved.

Prepared as a no-cost industry sample. Nothing in this brief is a substitute for engineering, legal, regulatory, procurement or financial review.

Evidence map

Four public signals that can be converted into a commercial account list

Signal	Commercial meaning	Source
Funding locates the real centers of gravity	Investigator-level award totals show where research is actually funded rather than merely published, which is an earlier and harder signal than a citation count.	[S1]
The naive query returns the wrong answer	In Tensorust's sample the largest raw-dollar recipient was a contract administrator, not a scientist. A partnering list built without that correction opens with a false leader.	[T1]
Publication volume is not commercial evidence	A defensible case pairs literature signal with funding, trials and regulatory record rather than counting papers.	[S2][S3]
Competitor programs are traceable to a target	Trial registrations, regulatory action and filings join to a specific asset or modality, which makes positioning inspectable instead of asserted.	[S3][S4]

A 30-day operating test

1. Define	Choose one product, geography and buying event. Exclude broad market questions.
2. Resolve	Join the owners, agencies, awards, filings, research and named competitors connected to that event.
3. Score	Rank accounts by available budget, timing, technical fit, incumbent weakness and source confidence.
4. Monitor	Refresh the evidence weekly and alert only when a score-changing event occurs.

Why this is different from a search result

Each source record in Tensorust keeps its origin URL, retrieval timestamp, rights note and payload hash. The useful output is not a stack of links. It is a repeatable decision recipe whose evidence can be inspected and refreshed.

A full engagement would add company and facility resolution, contract and filing joins, confidence thresholds, exclusion rules and a change-monitoring cadence.

Sources, provenance and limits

Primary public sources

[S1] NIH RePORTER (public domain)

<https://reporter.nih.gov/>

[S2] PubMed / NCBI E-utilities (public domain)

<https://pubmed.ncbi.nlm.nih.gov/>

[S3] ClinicalTrials.gov (public domain)

<https://clinicaltrials.gov/>

[S4] openFDA (public domain)

<https://open.fda.gov/>

Tensorust governed-data screen

- Tensorust governed NIH RePORTER lane: investigator research grants only, funding split across named PIs on shared grants.
- Every retained record includes its source URL, retrieval metadata and governed row ID

Method and limitations

- Award totals are a snapshot of the collected sample and are split across named principal investigators on shared grants. They are not a measure of institutional research capacity.
- Company statements are treated as company claims unless independently corroborated.
- Keyword screening can include false positives and miss relevant records. A paid decision map applies entity resolution and manual quality gates.
- No claim is made that any reader needs Tensorust, lacks internal capability, or has not already identified these signals.

Compete above your headcount.

Tensorust turns public records into cited competitive intelligence for teams taking on larger incumbents.
