

Medical Devices and Diagnostics

The predicate landscape is public, and almost nobody maps it

6,260

Substantial equivalence clearances
recorded in the 2024 to 2025 window
[S1]

74

De Novo grants in the same window, a
ratio of about 85 to 1 [S1]

34,923

Class II device enforcement records
available for competitor review [S2]

Decision summary

Device strategy turns on the predicate landscape and on which competitors cleared what, when, and by which route. All of it is public. In the 2024 to 2025 window openFDA records 6,260 substantial equivalence clearances against 74 De Novo grants, a ratio of roughly 85 to 1.

The opportunity is not to collect more documents. It is to connect funding, technical proof, regulation, competitors and buyers into one account-level decision map.

The practical question

Which predicate devices, clearance routes and competitor histories shape your fastest path to market?

What Tensorust would monitor

- Map the predicate chain and product codes most relevant to a device, with dates and applicants attached.
- Reconstruct competitor clearance histories including route, decision code and time to decision.
- Screen enforcement and recall records for incumbent weakness in a shared customer base.
- Monitor new clearances and enforcement actions as dated signals that a competitive position has changed.

Prepared as a no-cost industry sample. Nothing in this brief is a substitute for engineering, legal, regulatory, procurement or financial review.

Evidence map

Four public signals that can be converted into a commercial account list

Signal	Commercial meaning	Source
The predicate route dominates by a wide margin	Substantial equivalence clearances outnumber De Novo grants by roughly 85 to 1 in the recent window. Route selection is the single largest timeline variable and it is publicly evidenced.	[S1]
Competitor clearance history is fully inspectable	Every clearance carries applicant, decision code, product code and date, so a competitor's regulatory path can be reconstructed rather than guessed.	[S1]
Enforcement records expose incumbent weakness	Class II enforcement actions are public and searchable by firm and product, which is direct evidence for a displacement conversation with a shared customer.	[S2]
Reimbursement and federal buying are separate public trails	Award records and agency spend can be joined to the same institutions that buy devices, which turns a clinical case into a named commercial account.	[S3]

A 30-day operating test

1. Define	Choose one product, geography and buying event. Exclude broad market questions.
2. Resolve	Join the owners, agencies, awards, filings, research and named competitors connected to that event.
3. Score	Rank accounts by available budget, timing, technical fit, incumbent weakness and source confidence.
4. Monitor	Refresh the evidence weekly and alert only when a score-changing event occurs.

Why this is different from a search result

Each source record in Tensorust keeps its origin URL, retrieval timestamp, rights note and payload hash. The useful output is not a stack of links. It is a repeatable decision recipe whose evidence can be inspected and refreshed.

A full engagement would add company and facility resolution, contract and filing joins, confidence thresholds, exclusion rules and a change-monitoring cadence.

Sources, provenance and limits

Primary public sources

[S1] openFDA device 510(k) and De Novo records (public domain)

<https://open.fda.gov/>

[S2] openFDA device enforcement records (public domain)

<https://open.fda.gov/>

[S3] USAspending.gov federal award data (public domain)

<https://www.usaspending.gov/>

Tensorust governed-data screen

- Tensorust openFDA device lane: clearance, De Novo and enforcement records resolved to applicant and product code.
- Every retained record includes its source URL, retrieval metadata and governed row ID

Method and limitations

- Counts are records returned by the openFDA device endpoints for the stated window. They describe regulatory activity, not market size, revenue or clinical merit.
- Company statements are treated as company claims unless independently corroborated.
- Keyword screening can include false positives and miss relevant records. A paid decision map applies entity resolution and manual quality gates.
- No claim is made that any reader needs Tensorust, lacks internal capability, or has not already identified these signals.

Compete above your headcount.

Tensorust turns public records into cited competitive intelligence for teams taking on larger incumbents.
