

Recycling and Waste Automation

Denied grant applications are a qualified account list

307

Applications in the second SWIFR round, requesting about \$1.072 billion [S1]

17

Selected for a combined \$58 million, roughly 5 percent of dollars requested [S1]

\$36.5B

Low end of EPA's estimated U.S. recycling modernization need through 2030 [S2]

Decision summary

Public grant programs reveal far more than who won. In the second SWIFR round, 307 applicants requested about \$1.072 billion and 17 were selected. The other applicants scoped a project, costed it, and secured a public body's sign off. They still have the problem and the plan.

The opportunity is not to collect more documents. It is to connect funding, technical proof, regulation, competitors and buyers into one account-level decision map.

The practical question

Which facilities have documented modernization intent and a route to capital?

What Tensorust would monitor

- Resolve grant applicants and recipients to facility, operator, equipment scope and project timeline.
- Separate funded projects from documented but unfunded intent, and treat both as distinct commercial lanes.
- Score sites by material stream, retrofit compatibility, capital route and expected procurement timing.
- Monitor amendments, state plans and bid notices so outreach arrives before a specification is locked.

Prepared as a no-cost industry sample. Nothing in this brief is a substitute for engineering, legal, regulatory, procurement or financial review.

Evidence map

Four public signals that can be converted into a commercial account list

Signal	Commercial meaning	Source
Unsuccessful applicants are documented, budgeted intent	An applicant scoped a project, costed it and obtained public sign off. That is stronger qualification than most inbound leads carry, and it is public.	[S1]
The modernization need is officially quantified	EPA estimates \$36.5 billion to \$43.4 billion is needed to improve collection and processing infrastructure through 2030, which frames the category rather than any single account.	[S2]
Project scope language identifies equipment fit	Public project descriptions name sorting lines, contamination, labor and capacity constraints, which map directly onto specific equipment and analytics categories.	[S1]
Timing is visible before specification closes	Award notices, state plans and local procurement records expose the window before equipment selection is final.	[S1][S2]

A 30-day operating test

1. Define	Choose one product, geography and buying event. Exclude broad market questions.
2. Resolve	Join the owners, agencies, awards, filings, research and named competitors connected to that event.
3. Score	Rank accounts by available budget, timing, technical fit, incumbent weakness and source confidence.
4. Monitor	Refresh the evidence weekly and alert only when a score-changing event occurs.

Why this is different from a search result

Each source record in Tensorust keeps its origin URL, retrieval timestamp, rights note and payload hash. The useful output is not a stack of links. It is a repeatable decision recipe whose evidence can be inspected and refreshed.

A full engagement would add company and facility resolution, contract and filing joins, confidence thresholds, exclusion rules and a change-monitoring cadence.

Sources, provenance and limits

Primary public sources

[S1] EPA Solid Waste Infrastructure for Recycling grant program (public domain)

<https://www.epa.gov/circulareconomy/solid-waste-infrastructure-recycling-grant-program>

[S2] EPA U.S. Recycling Infrastructure Assessment (public domain)

<https://www.epa.gov/smm/us-recycling-infrastructure-assessment-and-state-data-collection-reports>

Tensorust governed-data screen

- Tensorust governed EPA grant lane: applicants and selectees resolved to facility, operator and project scope.
- Every retained record includes its source URL, retrieval metadata and governed row ID

Method and limitations

- Program amounts describe available or announced public funding. They do not establish addressable revenue for any company, and an unsuccessful application is not evidence of a budget in hand.
- Company statements are treated as company claims unless independently corroborated.
- Keyword screening can include false positives and miss relevant records. A paid decision map applies entity resolution and manual quality gates.
- No claim is made that any reader needs Tensorust, lacks internal capability, or has not already identified these signals.

Compete above your headcount.

Tensorust turns public records into cited competitive intelligence for teams taking on larger incumbents.
